### **DETAILED ACTION**

1. The preliminary Amendment filed 1/3/02 has not been entered because the amended claims are unrelated to the claims as originally filed. Therefore, an action on the merits of the originally filed claims is as follows.

### ***Specification***

2. The abstract of the disclosure is objected to because the term "is provided" is stated in line 1, and the term "means" is stated in lines 3 and 6. Further, the reference numerals should be deleted because they do not match the numerals/elements in the figures. Correction is required. See MPEP § 608.01(b).

3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

### ***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 3672

5. Claims 4, 5, and 7-9 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure that is not enabling. The limitations of a rigid casing with a sealable aperture, the aperture sealed by a sealing material, the elements having two hemispheres joined by (or formed by) plastics material, and the elements being buoyant are critical or essential to the practice of the invention, but not included in or enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). The claims recite such limitations that are nonenabling by the specification.

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claim 13 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite in that it fails to point out what is included or excluded by the claim language. This claim is an omnibus type claim.

### ***Claim Rejections - 35 USC § 102***

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 3672

9. Claims 1-4 and 6-13 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Bijleveld et al.

10. Claims 1, 2, 6, and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Cooke, Jr.

Cooke, Jr. discloses a system that includes a sensing apparatus comprising a housing 92 and sensing means, characterized in that the housing comprises a plurality of separable elements 91, 111 to which data acquired by the sensing means is transferred, and which are releasable, after data transfer, from the housing. With respect to claims 2 and 6, the reference teaches: wherein the sensing means includes or is connected to electronic memory 95 means which temporarily stores the acquired data; and wherein the separable elements are spherical. With respect to claim 12, the reference discloses a method of acquiring data from downhole, comprising placing downhole a sensing apparatus containing a number of separable elements 91, 111 and releasing the elements to carry acquired data to the surface as required.
